Turn On Flexibility and Control

PlayNetwork's Combo™ C400 hard drive store-and-play music player, is a comprehensive platform that advances the many ways music can be controlled, distributed, and played to enhance the in-store experience.

The Combo player is PlayNetwork's most versatile music player, capable of storing thousands of digital quality songs on its hard drive. Added flexibility comes from Combo's ability to receive, store, and play custom branded music from dial-up Internet, broadband network (Ethernet) connection, or from CD-ROM uploads. This diverse set of distribution methods is especially useful to businesses planning to use private wide area connections between their stores to facilitate efficient content management and delivery.

The Combo player is part of PlayNetwork's 400 Series suite of advanced music playback systems. The Combo player allows users to control how and when content is to be played at varied times of the day or in specific store zones.

Features include:

- ❖ Direct access to song and program information and control via a built-in 4-line, 20-character Liquid Crystal Display (LCD)
- ❖ One or two zones of simultaneous music and/or messaging playback
- ❖ Dynamic range and frequency response

The Combo player also incorporates all the unique playback capabilities of PlayNetwork's earlier innovations, including random song shuffling and playback for added variety, dayparting, consistent volume balance, and program rich mixing. The Combo player is a practical, high-performance digital music system that enables leading brands to Turn On the in-store entertainment experience for their customers.
